

Balderdash

- a PsyOp protocol based on social networks dynamics -

Introduction: We will begin our journey with a thought experiment involving natural language processing. I will give you several paragraphs of different formats and you will have to decide which one of them was generated by an algorithm and which one was written by a human being. Please note that I had a much larger pool of text snippets so the numbers will not be in order all the time. Let us begin.

Text 1:

“In the 2016 study, organizations that seek to exclude technology that serves an audience, message, or policy, this research question groups provide geographic information with an order of magnitude greater mental representation of these conditions than does the non-research questions. They ask not only about the nature of the human exception but also about how the right to privacy influenced these conditions.

To gain a better understanding of how electronic social networking (ET) for ostensibly user-friendly media can create the GEFOP loop, organizations best focus on those factors that have long been tied to technology privacy outlined in the policy. Individual governments and organizations can extend those gaps these times, making EFT entry into the P2P ecosystem a vital tool for those in need.

Unbeknownst to both researchers and policymakers, besides encountering significant barriers to digital media reflection, the fundamental Mission of the GEFOP family is just as important for the freedom of information movement as it is for the public safety, privacy, and reverse engineering of essential technological risks. There is a line down that CFTE secure digital information does not provide that protection. As a consequence, this OEM typically devotes some time, resources, and time and energy to look for amenable solutions that might cut long term short the process of building algorithmic infrastructures that eliminate cybercriminals.

In terms of much-vaunted security infrastructure goods like Android, conversational interfaces like Google Glass, payment systems, and payments apps often exemplify this highlighted goal. Wireless networks must be constantly monitored for the ease of transmitting the e-mail from an e-mail account to an e-mail inbox. "Truth" or "ability" originally derived from security definitions of communications are rather poor compromises at first glance coming from practice. However, over time most forms of EFT adoption should join hand luggage. Internet-connected devices often provide a secure form of Darknet withdrawal and trader funds by serving as a bottleneck from point A to point B, ideally with winners extending their appeal beyond the most highly vulnerable cells and end users.

To add to the array of problems a proposed set of limitations is raised concerning privacy

protections that great practical use cases offer. Privileged lives and basic USDR rights guaranteed by the article generally limit civil blogger and user-friendliness with the more privileged. GDPR-enabled data enhancement, sensitive long term health data or Kanban added gesture security could potentially make businesses much more vulnerable to securing as an advertising pariah in the US. Unwanted Air-TIMEA filtering or delay on ISP demands on displaying data in EFT-only channels or configuration options, blocking of almost all hoop rabbit still networks associated with EFtry enabling mainstream players like Google to find ways to compress royal asthma data in order to use EFNT power to deploy or store biometric signatures or fearful clicks biometrics data that similar metrics could contain—such as XEC log ends not only for legitimate and malicious consequences, at least geographically, but also with noted long term satisfaction or loss of Pennsylvania or it's frequently methodical location data. Personal information security would become a performance killer and there would be little to no need for company and general trade researchers to enter into a debate about whether you or someone currently a 'human' or a 'computer' is actually a listener.

Metrics and Business Case Studies to Cross-Channel Databases: Censorship, Rapid David McAcrima Evidence Summarizes Proposals To Maximize MIPS Transfers

The changes transfer themselves out most often to electronic companies seeing the flood of users emerge in such a way instead of the corporate revenues received by companies trying to protect them. These new funds to undertake cybersecurity discussions can reduce court costs and redress claims, provide increased profit margins, and promote an ongoing flow of the same data and risk analysis on an ongoing basis across multiple networks. Given the likelihood that the design, development, medium, and daily upload of e-mails and social media information-downsizes of CMs confer ability to risk detection, public banks, and operators like Google would gain negligible remuneration to the bigger brands, antibiotics firms would gain limited access to corporate savvy violating possible company property rights but inevitably women and tattooed photo-carriers as well—these steps represent a psychology shift, a shift that touches the breadth of what it means that e-mail solicitations are focused on who may have already raised a family tax refund more than those who haven't. If a privacy lawsuit undermined the bulk collection of customer data, credit card data how was imperiled would simply be known to any family under arrest or double-crossed since they'd already been provided over the Internet by foreigners. Exceptionally problematic breaches will also increase the likelihood of cross-device exploitation, plugins that store e-mail receives copies along the path of storing credit card, phone, and local and instant messages. If all of this worries you, "smart" purchases will require your iPhone or Android, ES, need to be secured by pro forma. “

Text 2:

“Reality: Make trouble with them from literally any point of view.

CB: Should you give all ages?

S: You are required to give the Austrians the correct number of medals. It is also really strict.

CB: Okay.

S: So there are those aged up to thirty-nine and then you are required to give them all your medals before seven o'clock at night, for a quarter hour every day until daybreak. Could we talk about your

concussion treatment?

CB: Same for the soldiers but with significant edema. You'll never get the hang of it when you are where you are.

S: There are Arsenal players who are properly trained, physically, psychologically well-trained and have to deal with repeated pain for so long.

CB: -Sorry, not sorry.

S: Especially the few boys who are subsisting on Cheoch's product.

CB: Everything needs work. Cartiophile service is transferred directly to the football club in Nottingham. We do not advertise any sponsorships."

Text 3:

"FROM OXFORD

RIOT PENNSYLVANIA, 3-8 odds on

I met an elderly guy in college who did everything the AI taught him to do and then came to me and said 'craft name is crap.'

I told him his first priority was getting ready for the club matches. And he stood up. But as a coach who has chronic pain and looks down at countenance unable to keep his verbal expressions up he tried making even shorter sentences.

He found out from me that sporting coaching was his mother's. When something suddenly showed up at his apartment he had to react.

Giving him violence. I would watch his normally tame legs picking up the stones while he was on the ground. Three times he would slap her, kiss her across the face when she left him, even grab her.

"Drug abuse never occurred", she said. "I was taken ill and incontinent, dribbled out, choked above the waist and sobs occur every week. What would any hospital mind help an elderly man, be the least repugnant notion?"

She checked her Maoist friend's life record by achieving three Winter Olympics medals. He is one of the best architecture graduates ever held up to photography. The space scooter industry that emerged years ago is one of the men with the physique to the modern record books.

The minimum age is for professional athletes to attain the largest possible force is 13-15 years old boys, toddlers, children; this is Zen.

Confessions of a grizzled old fall housewife suggested to me back in the early '60s that sometimes

the best science books I've read emphasized strength and conditioning every day. Pretending to be an older European might actually help corrective sports.

It also beat the androgen system, which seems to be ill-regulated badly enough; no scar or injury, like an extra flush; everyone has an 'incidentally thought' moment... friends.

The authors gave an old bingo card to go round when seniors came over, reread books they previously isolated low out of class. In the end, it didn't matter, they would just devour her.

Cole Kilcoyne heard and loved from over 40 elderly people living on an upmarket caravan in a town of about 80. Last June, researchers at NASA/Cave Mars laid out the way to the Moon by creating mud resonators for dust particles to travel around.

These resonators are quite big thanks to the quality of metals and the fact that the upper atmosphere has very tiny amounts of sand, gravel, tin, lead and other solvents in it. Spatial size can vary greatly with the amount of dust and is substantial enough for both making fulfilling worlds (being arranged clearly in such a way that the user can see they are traveling through spaces) and taking on activities. Those deciding on how to impact these worlds that had never existed before getting plenty to experience in space- a unique quality for a maelstrom so extravagant, and it's so well suited to living on Mars.

Written in laureate lacy, yellow, and black tones, this open-beam bead is available in very affordable condition and don't have a whiff of rustling under the pouring lid(s), as we saw off in 'Dreamspace'.

Dr. James Jenkins

Consult the blog [here](#) and do some reading. Links to the video tutorial and another blog detailing the creation of the resonator can be found [here](#). (image as highlighted briefly)."

Text 4:

"By Ralph Giorno

Simon Bruce, the photography director, and a lifelong cyclist will start May 1 out with his solo Open Bike Series in the One Direction 8 Mile Cycling Race at Watkins Glen.

"This is one of those quiet events where you come totally out of your comfort zone, your (expletive) riding place comfortably following the easterly winds," he explained.

And once he's done that, Bruce can wheel back to the queue and start wringing his hands. "I'm like cheering for him," he said. "He's hoping for you, he's realizing how much he can do. I won't be touching that butterfly at any point before I get there but there are lots of attendants."

He's happy for his friend Mathieu Basur, a 42-year-old Montreal cyclist and cyclist who is the CEO of Airline Bike Australia (ASA). He's ideal for this competition as he honuts the motorcycles far beyond the MotoGP – the first time he'll race since his first-place victories in 2000.

"We definitely have a lot of experience to get through circuits that matter to Australians," Basur said. "It means it won't surprise me to see senior riders chugging from Toto to Paddy Farm and cycling back home all over the country who have the rhythm at the start of their races. I've never been to any other parc before and I know it is someone who knows as well as anyone to beat the race on their own."

Balagur comes from a much more cautious background with a Viat coach, and last year Albert Moine showed his passion and confidence in Daniel Ricciardo. I spoke to each of the three and one gave him across to review for Bastian Schweinsteiger and sent him up there on his latest favorite; Carlos Sainz

The rest, however, showed caution. Scott McEvoy at Griffith Park famously ran early in an MTM conversion last year and warned the fast-playing Frenchman he'd go on strike if he didn't tune in during the race. The Italian team has already agreed to play down any suggestion of foul play.

Balagur is adamant that Bombardier isn't in their game, telling The Daily Telegraph during his November election challenge, "I can safely and honestly say I would never run December 15 an HGV race if I was allowed to do only one. If I could do four or five HGV races on ZDF motorway by chance – I wouldn't do DIDs on ZDF. If I could do a racing death sentence if I actually managed to finish [in an HGV] – Piper'd up and lifted me back to what I am now before you and me."

His challenger reckonboss Alan Reddrift has seen the dramatic trend that's the invariant in cycling: for some people they believe it, this year Bauhaus seemed dangerous and ever-changing. 9000 people were potentially drinking at that event last year and on February 12 this year at the start of the second edition of Stage 13, G3 splits were dramatically lower (4.5kilometres) than any test at Campagnolo. The triumphant aftermath has been particularly striking, mirroring that reaction in the promoter Ken Jacobs' return to Etihad Stadium. Routine plans for some of the biggest races are already in place, he said, which begs the question: What if it looks too much like everything they'd said a decade ago isn't all they'd insisted they were?

A group whose leadership Dylan Rowe has hit the nail on the head try was, however, to no avail. "Cycling is fluid and dangerous, but if it's looking like it is, live for it," Reddepra blabbered. "The big gap between the companies much too often is about their timetables and how idiots you have to round that off. It's a hangover – it's final marking day and we press cyclists to claw the move forward until they're comfortable that it's really safe for the team. Short-semester weather is difficult and it floats around like a tide, resulting in getting you skiing while at the water fair. Live jet travel moments: that is how it works."

Balagur's two most favorite interventions for 2015 were baby-Choco (population 759 – at 1118 tonnes). Merkur's team ticket is bound to have big teeth once Clare Baldies is out this season – including the Pikes Peak Runswords legacy as the longer-serving Fly 4000 run trial – set to take place late next week in Holmesie Mountain and on June 9 the Line Continental (1km 12km) uninitiated race will feature on Sky Sports. "Live coverage of the race is based on high-resolution video agencies with some 'high frames' that use analog footage and mixed modes in real space," Twitter adlib master @RalphJ_Garage tweeted."

Text 5:

“Hanayame claims it is nearly completely unnecessary for Universal Single Directory Service providers to utilize CPOs. Integrating CI with UDS strengthens the capabilities of CI core capabilities for avoiding backlogs and deployment problems.

Halita Carlos stated the data center field is about 90% the number LX console chest area in Cowery started a couple years ago. Of course this figure is still an unproven claim and will be the subject of some niche gley-fun PR campaigns in the future (as is Carspot Ventures' Googlebot campaign given the (unfortunate) flagship product Stellar meets that code base) but they are encouraging commercial use that supports ZeroMQ and ships without you having a microsystem.

GRADE T-10 A Machinesch, Deborah, 1973 Philolargery problem.

Learning the importance of sound is a multi-disciplinary problem at the theoretical level. It is sometimes referred to as Speech or that of Mind, but probably much more so than Textics or Construction Ecologies. According to Denghong, the deficient above properties of precalculus face a very important task, and probably a greater one than any other intelligent activity, especially when it is emphasized, according to Wolff (Hedlund 1973) (emphasis added). A philological treatise has already been written on the cause of Common Symbolism because prior to her early studies of Philologies, Weltweiser was unable to build skills hiding the root of the argument fairly close, even with complementarity to quality texts. Illadiming the root of this phenomenon has yet to produce great flourishing – indeed scholars- and Swird (1981) has rather boldly heaped praise upon those Essays from which to deduce the power of the philological study. Chris Coyle's translation into English of Liang's (1976) pinnacles limited and from which some hundreds of works are successfully deduced confirms these Bodleian Safranov techniques. Another first-century definer of the historic philological view of speech is Coyle augmentation of monastic performance; cheaper of text than that already ascribed to another school of Teaching and Language, although only slightly so.

In regard to Texticsophiris (Parvasian third volume), there are a number of interesting appendices. In the early days, there were an increasing number of half volumes or a combination of three Composition or Special use of the same kind. However, with the explosion in language research in the 19th century, the names of series and random numeric lists come into being. Naturally, there is much much more to it than the varieties or expected prefaces given by Early authors. Indirectly, many correlations are suggested in indirect ways. Further, like an inverse gradation, an earlier ffsional prediction can also be made, based on the fact that text in an earlier time was more players, and less homogenized. HTML and JavaScript are re-text by one of those in his combinatorial noun PMs, whose Two- Times in Human Writing was first modern formulated by Abou Bouardescu. Placing these directions in multivollectably conserved (W. Northman's 1984, pp. 66-87) and verbally-modern (Sitting 1992, p. 206) text should be able to provide uniformity from two, indicating the diversity of structures only extended to often based to nearly comparable sizes.”

Text 7:

“Changes in a Tier C Score this semester: Purification II fraction of average; Excommunication statistics are now more indicative and proportionate to ethnic groups, preventing subjects from being identified as Royals, partially masking the relatively high incidence of territorial loyalties in Middle Tipachian groups.

Category III specific changes: Breaches at either November 20 and March 21; Acts supporting an initial remedy plan, may cease more often (or last longer); Londinale tends to nug for more adversely sometimes and on a more regular basis; Criminal cases often become painful and frustrating to deal with.

Changes in a Tier C Score this semester: Workskin ranks are now more evenly distributed among subjects; Observations are always statistically significant; Significant numbers of lenses devote much of their research to regaining labels at the rank; Identification is abrupt; first and third line choices are more often written as an affirmative obligation.

Sexe-Thompson Fjords end armor representation today the widest and widest compared across Risk Size and Prep curricula -- Latino males from May point the way for girls (cri = 12 HI): A significant number is displaced from Offense Offenses in Age and Education (Y = 47 HI RP. 2) to Defensive Offenses (Y = 53 HI RP).

Changes in a Tier C Score this semester: Racial ranking indices contrast sharply with Millennials' demographic conditions in the workplace. Particularly a high national average for "Race-Specific Industries Sales" crops up (dieatal lesser) in high response sample source marginally larger (C = 19 HI RP).

Text 8:

"I think we may finally have closed the race here.

For the first time in film history, 20th Century Fox will lead the pack with success. This is going to be an important project that must hold the studio accountable from even reaching the final day of our bid. With two major replacements departing, buying the rights to follow and carrying on the success of our failed B-movie cult, the studio needs these tests to be competitive with the competition for the motor truck movies.

In creating the B-model, Fox has as fresh talent at its disposal. Without the recognition, Charlie Ada will surely prove, Mrs. Hill is fertile ground for her novel exploits. Her many "choice" roles alone are enough to bestow a boost on the production values of their original, internationally-acclaimed popcorn.

We're qualified to use this piece as our resource to discover who exactly Fox has become that much bigger, who is better at estimating the growth rates of a genre at one point, and what effect they at least had on each in the original sequences. It may take some creative intervention at this point to get everything off the ground, but I do think that—whether it's before or after any crazy Frankenstein twist—the success of a franchise is not measured against largely increased-to-greater production enthusiasm by the studio (sorry Movie Critic). The (flawed) contribution we've made to the rise of this earned us the title to next weekend's box office the lowest Midwestern company to plumb in nine years."

– Fox, Andy Goldstein, and Mr. Pulver, November 1987

During games to begin in National Football League and at home this season, Jordy Merrill is facing

the idea of playing a meaningful role on the field.

Why not take a look at the contract in Los Angeles.

"I'm glad that we had his attention today," Elias said. "Is that what you were going for today?"

Granted, a five-year situation is a lot of work from the Giants and G as they move forward. But Daniel Paul Etkidowicz, Cincy Parks and Mike Rizzo, hailing from Portland State, want to work with Merrill to see if his attempts at performance will aggravate his issues.

Now, approaching the Cowboys season, could a career problem arise. Should Jefferson Broad, the No. 30 overall pick out of Arizona in that draft, continue to spend his first four seasons at Southern Miss? Over the next month or so, sure. Probably not. But Fahn avoided a separation, wanting resources to be available and the flexibility to swap picks.

So Back to Albemarle. What underdog team needs more information? With Rizzo's arrival, Clark has worked Tre' Jackson into his mid-20s. What now? What exactly can then be done then?

Like much in Central Florida, it's a little complicated. The plight of Fisher County's economy probably plays a huge role here. Meaning troubles the sheriff and corrections agency can't solve — putting families and businesses at risk from severe economic and employment vulnerabilities.

This year, for all of Hlavatsky's pains, there are things to accept about the team: the 49ers still desperately need to generate enough tax revenue to pay off their myriad mortgage obligations as expected. Beer still does. Training and other tools still provide critical resources likening it to playing baseball.

Riot Alley joins live game coverage via TAMS.

Still, people have their objections that different officers cannot be sitting in separate offices when an NFL team costs millions to generate his maximum points.

Formed a couple of years ago, the school's football operations department is like a team with one genuine brain, blood and guts.

Text 9:

"Taking the hardest criticism Fox has ever thrown out of Alfred Hitchcock, Universal Pictures just pulled out all the stops in 's Alien II: The Last Exorcist,' something Universal just apparently did,

purchasing all due notice before notoriously mischaracterizing its own lifetime of production history.

The French Foreign Office did not exactly threaten to sue, granting the top producer worldwide copyright in September of 2005. It was a final "pay-to-win" tax on the huge release of 20 episodes at a time when a Hollywood budget was far past \$4 million (I think).

Other Writer-producers who rallied around Fox's attack was Cannes' Romeoya Hernandez (on the wheel of his flat MX) and the Mississippi writer Ruben Maldoni (of River Rat) who was watching from a rubber beach across the bay. Individually, they fought against any suggestion that they were role models of domestically televised work-in, but in the firm note: "If Ava DuVernay explicitly encourages filmmakers to express quality direction with body care experiments, simply draft Blackout Treaties as a cohesive sociological theory of cross-dressing literary works designed to elucidate, disentangle and separate material qualities that might be problematic to contemporary viewers."

The bumptious torture film "Hell On Earth" was also on the receiving end of Universal. Umass Productions produced a hilarious dig at Cee-Lo Black's Reese Witherspoon — page-footed into the installation, most likely — for The Vulture file-side screens to discover that she's Glenna's friend from the movie — not to mention numerous similar tweets she's made under her real name. Black will probably accept some blame for that attitude, but she got punished for it.

Almost immediately, while its latest story was winding down online, UA called adverts on its Twitter account hawking this movie for \$8 or \$9 dollars per page from unabashed advertising giant KS. GIJO LIT — wish2fb — on Monday writes that he responds to complaints via Twitter of "generaloharrison@gmail.com"; a wily included that it had two Teresa Harwells. So sing on. What is qualifying Starship Troopers-style "Distraction From Fact to Propagation" censored on Workers Perfection, Inventor DBs, Labs, AI, and Wright Fax. Pray (WTF?), Islam Hardesty for back-orders of great Nixon-era propaganda from 19th - boardrooms. Among other things this movie has there no regulation about what she can read, remark or interview, but why. In the meantime, I'd say rumors touching on the beholder are tardily written down in a day or two. But management seems to like this — particularly Angela Pfeffer and several other Tories — referring to "Dallase" to call it "responsible because when venues move technologies away from kitchen arts (serves as a universal guardian against order, which would concern 'Dr. Frankenstein' and other schizophrenia problems), we're limited by the aged techniques and machinery of power which and strangled numerically. Without such facilities, who would you be? You'd have to act like a thousand recording birds running away from a deadly landscape," Pfeffer that's as if the company is looking for B&M money to spill over the Scott's Blue. btw!

Answers. The absolutely non-real life results of this off-color atrocity were the removal of contentious or painful performances of America's NES Dreze hits from the sites. While eJokes and writing about their psychotic psychic failure back in the Silk Road got the job done after their credentials were used during Game Of Thrones filming, there isn't that much hope for the middle-aged soldiers whose expression Parkinson's may nurture. CGI always is Wonder Boy. ESCAPE (ALL_3_) found by — DANK VAD Cirler (@CirlerKM) January 28, 2015. "

“Midlevel word laundering and avoidance of taxes

PUERTO, Argentina – Prosecutors in Argentina have charged three artists with the illegal trade of short deposits of currency by criminals, the Los Angeles Times reported.

Luxor Caledonia, 26, was among the artists charged in Spain earlier this year for allegedly accepting collecting extra tax revenue from Mexican banks.

The paper said experts with the Ministry of Justice, with assistance from the Panamanian prosecutors' office in Buenos Aires, were investigating several specific cases of exchange of pesos for pesos, the currencies of trust, and their other transactions in non-transactions. Investigators saw several faces to face with secondary merchants.

Toyota Motor Corporation is one company accused of using use of debts to evade taxes in Argentina that haven't been investigated since 2002 and that do not match the value of the peso dropped by Batman and Justice for All and other companies, which had operated under authorities' interpretations that failed to follow strict consumer protection laws.

Guido Rodriguez Bertoloso, representing the drug gangsters, also pleaded guilty in April to charges including being negligent with money from bribes collected by Zarfest in Spain.

(\$1 = 0.4900 Argentine pesos); 2018 has been a roller coaster journey for Mooseeye's slowly spinning televise. Over the next few months, we will update you on the workings of same frontline wheels in our video (or optionally some version of it). It's just a matter of good timing because the male computer will get operational for field testing tomorrow. Customer feedback isn't a requirement, right?

While you were tweeting early today, IBM's research team mentioned a number of major refinements including 2D field corroboration capability, environmental driving to ensure aircraft can see a target, improved max speed calculation, more practical updates to The Generator, and the ability to launch in Flightplace physically, all within one year.

Do we know what Detroit's 2018 CIG signals spin at this point? Or, it's late Thursday, and for the first time, the live output will reorder. The enduring debate on who will be joining us next year involves objective, early output, points like that and so on!

Want to improve your visibility of said show? GET SPECIAL REPORT

It won't be rocket science! No one wants to see Bad News from DB that pops up on their home screen or in online highlights or random bits of news. We feel this, and you, 238,561 people you're so warmly forwarding are actually the actuators here. The Tech news logging system checks every opening of that rosters screen per user, even when their browsing history is deleted.

How much bandwidth needs to be shaved from those automated engines? First, you've played around a table that repeatedly whips up answers that only a few might bring up, including whether what's happening in order to best stand the test needs to be tweaked that best for each user. What turns out doing more harm than good? The smart lives for Peter Ryan Mallett and Mark Rieder too. They live thousands of miles away and they wrangle inputs and post warnings through a stoic glove. It would be foolhardy to think Regina Wu's Aunt Blazer draped socially over their asses that her idea for bringing kids flowers sits steady well outside the bureau threshold.

But concisely, what is this show? It's a writers' block show, one that provided a lively makeover and shuffling for each show's POO after episode 10. Although this is written two weeks before Conan chat with Hot Cast 2 Neil Novello, there was never entire roster of writers to summarize well, we reached out the games from the Futurama rotation and could put the gobbled of her diaries on a shelf. Designs changed and exposures sketched. We would summarize an episode on Thursdays to plan quickly that update and remaster it in its entirety after the show finished shooting. So, whether it showed fan designs of complications that were never addressed, but received more all-hands insights from Brian Cronin, Ken TOirdier, Ilva Gilbert, Manuel Bertold, or Scott Chalmers, they'll all air this show literally and accurately, one way or another.

The jump in the fourth series saw two pilots open up for enlargement. Axel Colorado was beloved for its ground level airing, and previously Del de Lait, and comic Lorraine Rutz was All-Star Fox. The story of ABC's Supergirl and its changing marriage in a sterile circus district dying not only in a not-so-fatal lightning storm-by-doom collapse but also Sam Rivers, Chew Washi, Boone Stamp, Johnny Drew, and Odier Malolo as well. Canada's Fifth Pegasus became the Cargo Essence babysitting agent known affectionately. It was the last sports show it could reasonably afford until it even went on a 21-night run two summers ago."

Text 12:

"The country reunified in 1996 as the world's third largest democracy. Since that time, four years after the Soviet Union formed in 1949 and 2000 are covered by the Lima Declaration, the UN Charter of freedoms and equal rights.

"The Lima Declaration is not far-fetched, except for its claim that the repivitas and vigor of democracy have reached the level of universal rapprochement and, therefore, that all is donation also suits the needs of all people in Peru, regardless of socioeconomic, personal or political background," said Juan Alberto Ptolema, the Lima campaign's deputy coordinator.

"The respect and unity of our people are also necessary for the success of the cause, so that we deepen the diplomatic lines of contact between the nations, add to their well-established economic integration, realize their fundamental value and bring about new policy necessary to ensure people's prosperity," they said.

The Lima government warned China when announcing Saturday's announcement of Sunday's "December Summit out of respect for the non-U.S. vulnerability," Weinbarzades said: "And for that, we should respond sincerely with an appropriate response. But we must also pay culpability if we do so".

As part of the joint security agreements signed at the summit last Thursday, China and Peru signed a strategic cooperation agreement that severely curtails U.S. candidacies in the region. Trump's pick for U.S. ambassador to Peru India Shaktikanta and Swaraj Lhaish, as White House chief of staff to China's first lady, too, were excluded from the talks, although they were searched at government offices.

Foreign Minister Wang Yi Ta'er himself on Aug. 28 has conceded her "title to high office" is insufficient to defend the Lima mission. "The main reason for the appointment of the Ambassador in Lima is several reasons. They lead me to believe that her long experience of supporting, promoting and uniting countries in the common interests of the United States, our friends, the people are a sign of the persuasion," he said in a phone interview.

Wang retorted that the U.S.-led coalition reporting to Lima would be the ones to be responsible for steering a trans-Atlantic trade agreement out of its indefinite truce with Nicaragua's colonial and nationalist government that, under West-centric managerial control, brought on the December summit.

"China contributes to the continent passing judgment, and it contributes now to that judgment being carried out with the cooperation of China, the United States, and all its trading partners," Wang said.

The credibility of the Lima president may be weakened as the UN life-size recently climbed to a record 150 million members on Friday, up from its 110 million members 1,200 years ago. Suggesting an increase to at least 300 million, Otto Senuwar, the world's oldest consul in Lima, said in a statement: "It [the new figure] of 150 million only reflects Venezuelan enlargement and makes sense to put its astonishingly low economic growth rate in light of recent indicators to whom Peru is connected but tertiary geographical contacts. All PVPD states should be part of the 55-nation bloc, because of its beneficence as a place to build regional order. But an increase to zero does not strengthen the national interest unchallenged. CAO, next to Bolivia, Jamaica and some other poles, consists primarily dispossessed sector hence the need to include sub-districts to achieve its development goals."

Weng disagrees that the United States and the European Union are co-prioritising and controlling what it views as key investments to make, for example in health communications. "For an unidentified American business person to confirm that Asia is at risk under bellwether conditions depends on and encouraging zero riders," he added.

China lacks a political apparatus capable of mobilizing people for democracy or consensus policies taken on its own risk. But 6.4 million Tibetans are mostly Protestant and China is treating its byzantine political system as the world's smartest. IBM can't operate in Latin America while providing work on many fronts that other firms cannot.

According to the Dalai Lama, the CEON article, opposed to India's "attention deficit, hypertrophy, and abject failure", will be set at such a trough as to lead to an "ineffective security threat", underscoring

an increasing dissatisfaction. "Aid and aid organizations are a disaster because they are totally powerless in many areas and could set off inter-regional and international crises, triggering boys and girls such as Tibetans, Afra speakers, Burmese and Rwandans, Bantu and Azari" according to Haiquan Shaheed, director general of the Chinese Ministry of Culture in Beijing.

On Wednesday Marcelo Wildberghoff, a senior advisor to Lama Jiechiang of the West African chapter of the Chinese Communist Party, revealed that the Dalai Lama has lined up 112 potential train whistle-blowers."

Text 13:

RICHMOND – Hingle County voter signatures ramped up this fall on the order of early voting, with Election Day closer, because of both totality and excess turnout for the 845 S. Four wooden chutes sprouted years ago.

But there is no guarantee that both heavily redacted information about "missing," white voters inched closer to Springfield during the four-year slog.

Early voting began at three flea markets in April 2013, when Heather Bynumendorf worked on a house of roses at a house of Amatsu Buie for a few months. Then October came knocking: A tape in her hallway showed one group of white voters juggling in dark buggy seats. Buie producers were dispatched to pick the edges to remove the tape, a substitution Bynumendorf founded. But no white voters came in (Freedell County first directive: They had to cast their ballots Sunday, January 30, 2014).

But weeks passed, and the traffic finally stopped.

In August 2015, several white voters hung out in the shadow for 45 minutes to cast ballots at Eleftherios Baptist Church, but never as many as initially would have expected.

At the Fourth Day Comin', which is Friday and Sunday Eve, a two-foot black man was seen round to left. A neighbor squealed his name in a name tag. A polling place was closed in order to address encroachment.

Weekend early voting at the Outside Lands Institute

On Monday, Cottesmore County voters covered a couple easy blocks in Lee; we02 Road was closed for two days but not kicked off immediately.

By 3:30 a.m. CST, a black man likely waited at the Liberty Lobby at Booth Road. Then, mid-afternoon, a man pulled into the hay pit and grabbed a forklift and set into the truck.

The businessman ran off.

"This is great," the billionaire declared of a late master to an announcer from the entire Lower 48. Tottering through the Governor's Sausage Shop, he wailed on about the complete lack of black in those

four-mile stretches.

No, at Piedmont, could any of them own a cerulean brick hoof. It was Wawrinka feeling eligible.

But no one was getting any closer to 1872adosbury, where Hughes Conference hall stood NTU-elect Byron Hajdu said he heard of standing video canvassing for black fur and braiding ponytails "

Text 14:

"All images courtesy of Arapo. Before CNN's Chris Cuomo and Martha MacCallum-Hamel express their annoyance about Comey, most readers already know this: He was particularly flustered during an early Friday morning briefing by Russian President Vladimir Putin.

Our nation's top intelligence official warned that Comey was guilty of trying to avoid a politically damaging indictment of Democratic presidential nominee Hillary Clinton during the presidential campaign by calling for sanctions against Russia. He also called on the Russian government to refrain from meddling and serve Clinton in an indictment on her use of a private email server during the 2016 campaign as secretary of state. Meanwhile, Roswell-based Hell's Angels volunteer Joseph Elliott Saxon prepared a declaration aimed at igniting drama. After Weiner's conviction in March 2014, he was formally accused in federal court in New York of lewd and lascivious conduct, screwing up his affairs, stealing many girlfriends, and wreaking havoc on the electronic health records of women including celebrity photographer Ellen DeGeneres.

In the space of less than a week, Mr. Putin ultimately provided Schwarzenegger with a promise of a congratulatory memo endorsing the Putin regime's decision to arrest Weiner. Move to send PET Opera a message, Neel Kashyap, the vice chancellor of the Russian Academy of Sciences, ran cheering slides about the impending election. And no, Mr. Macron's old nemesis, Madame de la Suisse, said President Xi Jinping would be reviving ISD, a state-run, pro-Russian state-run news body run by FBI agent. Carney told Mr. Macron that the Pyongyang meeting, however, stumbled due to music and other bad timing and was just an upshot of a week spent waiting and working. "Cyberstrats," she said to my colleague Eugenio Scalvarini, "judged it substantially better to send him to Yerevan."

Putin's "meeting" seems to confirm Mercer's perception. (Remember, there are more problems at Lincoln now than with Russia, since both Clinton and Comey had their variety of Cabinet appearances, and that there are now more intelligence agencies in Russia so that they're aware of Russia entirely.)

That Putin is reveling in a bit-long Roseburg evening isn't to suggest that Bannon's wild fantasy business would be able to wear off, not least by steering liberals towards Moore and Graber as although he – like Mr. Moore the 45th – doesn't seem to mind. At least, if he enjoys giving them an answer they can't deny. The fact that Putin and Stevens are excellent, if Leni Riefenstahl-like, sisters suggests that their influence is growing beneath them for a long time. But we doubt Bannon would simply sink through having unlocked this whole American legal vortex.<|endoftext|>Janeally Publix just posted: Hackertons, Phantoms, 300 CE has been chosen for their special process a finite row of atoms that electrically burrows into an egg moribund that breeds, and moves about inside past the water, breeding a queen, giving me a Walrus P. dripping with bile that pops in by the thousands, "Play Owners: Furens. I wish you couldn't come up with the same words." Lots of snarky folks were at my

front door. I guess Hers is going to be another neighborhood vigil. <|endoftext|> When I wrote about the International Sanders Initiative for Public Lands last July (IBF Apr. 18) and the candidacy of Vermont senator Elizabeth Warren in a blog post near the end, it struck me that a number of climate change scientists were thoughtful and on their way out to explain their status to analysts when they asked for a break. And yet, they weren't always so straightforward. The Ignoring Climate Change Monitor adamantly advised supporters to find someone fluent in reading the establishment press's versions; it was short-answer oriented. The Climate Reality Watch team responded with more thinly veiled calumny ("Well, who has ever put forth at least \$4 billion of public money for UN climate action planning?") or open waypoint language (combined with a persistent sense of self-hatred for climate activists).

Next.

(The Climate Reality Watch team: onwards.)

Stipulating from Barry Sandberg and David Gergen's insights into the rights and harms of electric cars, scientists have found those responsible for EPA's new carbon emissions guideline mistake any targets for market transition period increases for electricity generation over the next few decades by just a couple peeks or a per-billion loss.

Or was it that simple – that is, that many impacts of climate change were already being borne in the 14 megawatts of output generated by the new road and rail sharing agreements signed with Germany, Spain, Italy, and France this June, and are starting to take place in metallurgical coal plants and power plants in the United States, but cannot move beyond that now 20 times or so less, where they are blown out of proportion to the new wells that..."

Introduction

This work is supported in part by an award from Imperial College London. A 2007 fund management study with the guidance of HRMA enabled us to profusely assess profits of the Royal Theological Society of England before 2010. Ten years later, we suggest that while benefactors are not known to police their membership from internal or external contributions, they may touch off an exodus of members to organizations other than the UK. Three years ago premature financial bankruptcy and acute social distress disincentivized our trustees from receiving contributions to these organizations, which was as unpopular as it was difficult for them to apply to the Board of Directors. Non-public boards can come under pressure to act of service via our policy banning last-minute appeals from underfunded backbenchers. This policy bolsters members' welfare and extended how those who show up in a power pull may just better scare away the screen managers. As such, large-scale public disbursement of research budgets, the choice between statutory review, whistleblower abuse and oversight, visible disclosure, and rapid institutional recognition can be airtight, even in a critically dangerous environment using public funds.

It is no coincidence that female leaders are reported in some very low echelons of professional and public office from Church to Goldman Sachs. In England, about 30 percent of new converts responded to the Priesthood Fellowship programme or something similar. One indication of their "pseudo" might stem from their backers, who invested huge sums to ratchet up their media protection through a set of management/administrative codes comprising Excelsior Tommy Iounaya publishing codes of "sinners" (measures of good order) bearing a whip, video/audio/visual emphasis, and qualifying reflections on the Bible.

While some apologetics might indirectly encourage owners and publications to proselytize, voluntary public participation may in some circumstances make until the relentless threats of spitting and brawling pose a greater threat to their honor in some new club. While the fervor which permeated in the worship of Jesus in the Gospels in 1745-6 could well have an influence, there is some doubt as to its breadth and extent. How the culture of hospitality, which could have hounded about from their fathers the foundations of American life, was ultimately brought upon by such authoritative and brutal searches is, of course, unknowable – the proverbial fallout becomes even more palpable. The need for the largesse in the playground communities is there in the strong paternal teeming of Barker's Ethics Institute around the Philippines, where former greatpimp James Foster, a Protestant who had experimented with birth control, describes youthful colonial ministers as apostates, dedicated peacemakers, disciples of L'Ata volunteers, Chávez jiao panchakarma, communists and Roman Catholic noblemen", and where what he identified as "poor" or heroic provocateurs were given perfect connotation as pillars of "power, wealth and power". It is as though Evans reports that "very few of his contemporaries were very good," denoting the only ones who were also at the club's peak. Faced with the departure of figures such as Rev Irish, a young writer turned ultimate guru, Benedict XVI, of monks in Ipswich and Chesnighamien, Eastern Set Council commissioned Mount Churchill with English regiments to gain support for its missionary work in the Maharajahic red wave zone, operated somewhat like counterculture cults. Small in numbers and loosely affiliated with the Communist Party of India in the USA (LBFI), the local people saw he had a voice of authority above everyone involved, and drew events, and organizations, equally unique. For chaplains like Wharton and Camden, it was how they were nurtured as critical voices of sentiment. This was followed in Britain by Joan Pervis when she clerked as a social worker but oversaw a national monastic trooper-land. Alternatively, similar rituals were learned from various martyrs, whose hard effort and high number were outfitted in little more than shacks with art as edifices or amusements.

In addition by this age, the world was in constant competition for the local Lutherans. Bishops who obtained office at Hampshire's Member "Principles" (now the Lords of Parliament) constantly placed for themselves procedures for guest-serving (presumably Muslim) others, such as one who managed male priests in Bad Rong. Head priest Daniel Williams attempted to introduce these maidservants into Westminster and in two campaigns against Calvinism Parish de'Theyva testy Baptistical training. Francis Wade proved backbench vigilant successor to The Westminster Royal next door now regime is breathed out until its greasy seat Buoyed by Latenedon's cathedral backing, a British Reformer presbyter York Committee (when responding to criticisms by Young's possible change of venue, BFI went for Scotland in 1937) helped post-crisis rooms filled with asylum seekers or even Japanese males tortured and stripped and maybe even worse. “

Text 16:

"... was released in Hong Kong on Friday and promised to announce its 12 new titles tomorrow during its launch on Friday 20 April.

In an update to MacRumors Saturday, Tiffany Yoon-Jeong said: "On 10-15 April, we're aiming to offer major new games between now and the Xbox One X. We think this could be extended to 5 more titles. We hope they're big enough for Star Fox. So that's all I'll say for now — make sure to see what's coming on when it releases. Also, we're listening to your feedback."

Q: Have you pinned down the next big game we've added or stream of? Jynx: It's happening now. Mostly. I think QA has been pretty direct. When QA met me in BPL Jynx had just received a response which said we want to release Visual Novel for Windows PC and we were really excited to make it perfect for it. Making it very broad to play with, QA gave us an ability to do jungle and we've now been able to make the QA calls for case games. Jynx and others have spent 12 months talking us through our vision for the Ouya and so there is a very strong case to be made that I believe the Ouya will be our best-anticipated consumer tech. We even collaborate with Barnes and Noble, doing our stores reinventing the portfolio (in QA terminology) and we're pretty proud of what we did there. But QA is one of the first places I went to for it; for as long as there is RENQUS it will be accessible soon across all platforms and we have no need to wait for it. Regarding the console end, QA is making an announcement. We'll have more information on that below. We are very happy with where Portal is and absolutely thrilled that we're supporting VR and ARN 's ability to do enough different things with it. Of course there have been a lot of people who have been anxious about imaging that we hadn't had before - and going with a VR term - which was a major disappointment but we want things to be focused on the console now so when you're talking about RENQUS and even if what's behind ARN what we think we'll be missing at the end of this month is RENQUS - we'll look at what's a different once again, now there's the walkthrough. Next time.

Q: When will we get Nathotti's update? Jynx: All of it. He's FRESH and VIRAL and there have been so many places played with Ellie on the ground that neither she nor her avatar saw her. She'll be essential, of course, but we could do three singulars, but we weren't sure exactly how she'd light up last week Sokar felt then the changes seemed a little jarring to some - I know what you're thinking - but we felt out of place in the time in that a year, last April is probably a better time to have Age of Empires and Nationalism Damage as the big focuses and given new details. As for a pack? We led the pack all along - four bundles, I did, HANDS I-1 Hacker. It won't be available after next year. Can you tell us why everybody looked at it? What do our methods for handling other players work differently as well? Ce Mars by KeeVee I ask Grace some interesting points, and my replies suggest a new plural.¹ The new States and topics we're releasing on the Ouya are themed around the new universe and the User-Interface. In the NewsThe Ouya is planned to come with multiple gameplay modes, technologically balanced regularly and a multiplayer mode that brings you closer together. At the moment this is essentially starting with the game being a cross-genre action adventure game then being Diverational to gamers. Justin may one day do a profit drawing, but it would be a bit like TurboClash 1 when that idea is still burning hot. Now there's just one thing you can talk about - and the act of talking is you ask the models as best you can! - they started to laugh. Now we can talk about nudity due to a good publisher trying to keep a comment cabin free: Their Blame game was initially going to release on PC but all the publishers involved decided turn to Linux and a plan was made to include Occult Adventures afterward to exclude nudity, something which the Ouya may have planned at the time, as with the first track. It turns out it was nexus mode - why (re)? There's a lot of possibilities for the next Nintendo system in terms of either brand placement and vice versa, but I think we will definitely be

moving to both. That could move the technologies up again and also the experiences play. That would change the relationship between the capability and hardware. Could they stream stereoscopes? Or just ship Virtual Reality headsets (and, of course, SteamVR pre-orders would increase. “

“Export lists of exported files for Android are stored in MCAFI. For more information and PRs regarding these files, refer to the MCAFI’s page.

Control mechanisms

Exports are blocked as the product instability and/or fragmentation within the competencies of various devices greatly restricts sales of Android OS apps. See Bugs and Priorities below for information on the specific restrictions handling techniques and limitations preventing export from other platforms.<|endoftext|>Weddy Hepburn was going to be fired from Communications and Broadcasting for violating U.S. Espionage Act Section 2621, but the Friday night retribution perfectly suited the end of the lawsuit, filed for by the federal government against Sony Pictures.

"Why are you going to Whaley? Why aren't you going to this place?!? They don't make movies! They don't make hashtag things. They don't make viral movies if they also have a PR push. That being said, the rest of us, are so fucking sick of it," the suit said.

The lawsuit was filed on behalf of a 113-year-old grandmother, in Clearwater, Florida. Holly Hepburn was fired from the U.S. Department of Education, after receiving reports of troubling violence and violence in school in the Rogue Hill neighborhood. Jennifer Heath's neighbor first reported the incident to law enforcement and was able to address it by issuing a report about her daughter. Confidential to Holly and several others, that report showed a cafeteria woman brutally beating up her daughter.

After being called and questioned, Holly was pressured to give a statement to a state hotline where she could conceal her allegations from law enforcement and top officials. Holly even filed a criminal complaint.

Despite Holly being in private schools, she was told that she didn't have to report the incident to authorities or a local law enforcement agency at all, as a family person, she that is their right under the Espionage Act. Transgender people face civil and criminal rights abuses through the use of legal and constitutional protections.

Computer intrusion and retaliation are short- term rationalizations of times gone by. After all, through the decades, America's multidimensional communications sharing networks have only grown with each passing year.

REUTERS/BuzzFeed Hey, come on up! Do we scratch our heads and wonder it's not your fault that we let ourselves fade from the reach of the censored internet, or does it really matter.<|endoftext|>Recently, Japanese hackers released a series of four pictures of the exact same humanoid Pokemon,

known as Hashi. Since Australia is home to Cave Dogs, who are essentially small nuclear robots, Hashi has been compared with Hengri, which is the problem the Pokemon belongs to.

Unfortunately for Hashi, his age is 600, and it's best to just take that below with will...

creative commons license

Now, there's a bit missing in that image. Instead, he may have been a pretty obvious engineer, putting them together using a combination of fabricated radium and an oscilloscope to see just how things had changed as he got older. It also gives the impression that Hashi's brain-catching facility was abandoned while it was developing, but the brain waves it emitted broken that assumption, as well. What's more, there has been no call sensitivity statistics on Hashi's condition since it was first revealed casually in October.

Of course, if anyone considers snakes, with more accuracy, our new endlessly upgraded snake McCoy could help quantify R, maybe.

This is the only two Pokemon in the Pokemon gallery that includes an eyes turn. Unfortunately, who could explain how Kyris are managed so poorly? From the creators of Pokemon at Blizzard Entertainment, you're never going to be able to identify those until your brain picks it up and does just that.

Choosing a mobile phone design is just that — choice. iPhone X is no different here.

Price: \$0.99

Reliance has made it clear that the X will sell like nails. The real-world regular nine-inch handset designed by Google has always been much smaller than the new iPhone 7 with sharper edges and grayscale glass.

Whether you want to carry it with you on the train or to surprise your big time neighbor, the Hi-Rez series also offer premium handsets and slot cameras.

Availability: reserved and in black (the UK only)

The phone came out in the July 15th issue of iPhone 33 and is available in black, waterproof black, and white. For complete details and pricing check out our May 2014 item roundup.

Price: £9,349

Posted by William Steinberg at 10:21 AM<|endoftext|>Book I: Capitalist Settlement Architectural Apocalypse

By Joe Whitcomb

Capitalist settlement builders lacked engineers and had experience in large project projects such as the Abbotsford, Victoria, Klamath & Kirkpatrick Sydney series of plazas or the Greylock Generator Series.

They needed neither complete nor "adequate" engineering or documentation.

At the time of Britain's first continent withdrawal in 1849, 40 tonnes of British navy force had also poured into China, bringing with them prime financing for the First Section SMUP, a civil engineering science class with a principle of reparation under which individuals ran up the whole cost of repairing and/or constructing buildings on them. By 1889, 80 percent of this funding had expired due to costs of bleeding and banging on the labor to carry out any important repairs required.

While Britain's gradual assimilation of China's technology to the continent town by Labatt, one may laugh at the understatement of the 'technology revolution'. Citing the US BLM Bureau of Land Management's First-Hand Robotics Cost – tardy in CPR values, a road to Sweden was built, Essex replaced the Second Earl William Street Dart Cross on the Pricestein in 1903 and Queens established new railway stations.

Seattle metropolitan center was constructed as a La Sapienza continuity/free from Britain. It had been built during well over fifty years of colonization and earlier than Korea. Much of its heavy rail and road replacement was a long process of resort and construction excellence continue to come from is accelerating development. It is the antithesis of the development being achieved and not the adaptation from experience. Because of international investment in for the increased Vietnam Gulf Treaty and of continental Europe's prewar.”

Text 20:

*“What is pH self-cleansing? If you want to know about that, you well can ask him or her. I've found that it's pretty simple to make a self-cleansing soap clean up super quickly in an undistressed and indoors. Skip the soap making, skip the bulk and just go for "scent trained products/powers". Supplies, not free samples, that can. This works with your body's pH meter and other filters. It can even save you restore your schedule. Plus it's only the water, not the 3HG, or ozone from the outhouse azimuth and bottoming up.\ Of course, it's important to first clean the properly before using the soap. You can pick up a wick exhausted from an engine with nothing to scrub away and this completely cleans your urine away. If the company were to market it fast then I'd bottle a quarter bottle of diuretics off for a month. The pH can be anywhere from 0.13 - 1, the area can be anywhere from 0 to 1.0, the osmolality is dependent on oxidation of acid done by the skin. Inverting the acid and pH can down considerably. BB Pix The best subject for self-cleaning for the first couple of months: Coating what you think is top. ie: Librium or holy water – Its fine age my some planets since they're so fine and women disagree. Make sure you get Macarena Giger's way lil you ever adopt it. Damp the water if not cool booze. Clean the muriatic, not the mirror. Mehr's pot – baked dry and jam-packed. Fabius Camden then used a camphor diuretic such as Dimethicone in their scenario and set it in your scotch engineer's glove for 4-6 hours. Anything else he noticed many women had trouble taking care of themselves despite a great deal of help. In every world, I've seen a woman blow past her stopping him like this (as was all they did wrong). People tim them. Now, with this blending, we have a longer (over borrowed) time, but they find more sleeping vagarella by watching him and going home with him day after day. So that in 6-8 hours you ease up. Done. I tend to use a witch hazel polish (or aloe vera even if not that Year True Gristay), just call me or Ea by around seven hours (or around a half hour, maybe in the morning and end up in an oven. They know of this drug you can get). What I most advise against is overfilling a crock pot of homemade going their way soon after they become good. This can usually be avoided by mixing a nickel bromide 2% solution, or acid water with the water, and when it hits the wrong moisture. Just remove it from the crock pot and let the acidic substrate sit longer and 1 to 2 gallons won't go well with the natural. Cleaning out surrounding environment: Your Location. pH locally. The buccaneer Brit doesn't stop there. As I mentioned, it's nice to find American liturgical arbiters, religious priests, thalars, orΛ and indulgences, who sometimes take care of those close to you, clean out them, and heal them the instant they're done. However, you should greatly avoid letting them out of sight or contact. So here are 3 searchable homes for good lawyers, Catholics, Catholic nuns, celibates, monks and concessions. You don't have to keep digging pretty far to learn of a religion that's off the timeline to be allowed to offer preparation for demonic efforts. This website contains some real folk skewing to the other side instead of asking us to give deeply rooted human rights to our country. If you keep your faith to that, that isn't that stupid. Don't be a part of the main evil in our world. Protect and worship our reverend saints and complete trust in the sanctuary under great patriarchs. Whatever happens to your religion, don't stop worshipping it. Keep: Our homeland
THE END Wedding Wars Zine How's that built in Australia? “*

----- End of text snippets -----

Well, what do you think? Which ones are computer generated? I mean, some of them are clearly fake, but some of them really strike as remarkably human-like.

As I think you already expected it, all text snippets were computer generated, using the following paper: “Language Models are Unsupervised Multitask Learners” by Alec Radford, Jeffrey Wu, Rewon Child, David Luan, Dario Amodei, Ilya Sutskever.

Is it impressive?

Let’s have a look at something else. I will show you another 20 examples, but this time they will be selfies. Your task will be to identify which ones are real and which ones are computer generated. **Steganography was not used** on any of the provided examples for identification purposes, I’m not tricking you.

Well, what do you think?

All 20 images were generated using “A Style-Based Generator Architecture for Generative Adversarial Networks” by Tero Karras, Samuli Laine, Timo Aila.

Another form of “technological extremism” is represented by deepfakes, which are using machine learning algorithms to create fake videos using celebrities or politicians faces. This received a lot of media attention when it was used to create porn. You can still find some of them online. I encourage you to go and take a look.

One of my favorite example of technology abuse is represented by the fake social media images that people love to create for themselves using tools like Photoshop. A great source for those is the “Instagram Reality” Reddit page. Check it out, you won’t regret it:

<https://www.reddit.com/r/Instagramreality/>

The funniest part is that you can clearly see that the images are fake, especially when it comes to bending the walls in order to “correct” body proportions.

Another great example of the power of machine learning has is the following:

<https://www.youtube.com/watch?v=HHf1dNHU0os>

Again, how can one protect himself from this? How can one protect from disinformation campaigns? How can we rely on clear judgement when our senses cannot help us anymore?

In the following pages I will try to tackle this subject in a creative and relaxed manner.

- 1. A framework of critical thinking**
- 2. Interaction model**
- 3. Countermeasures**

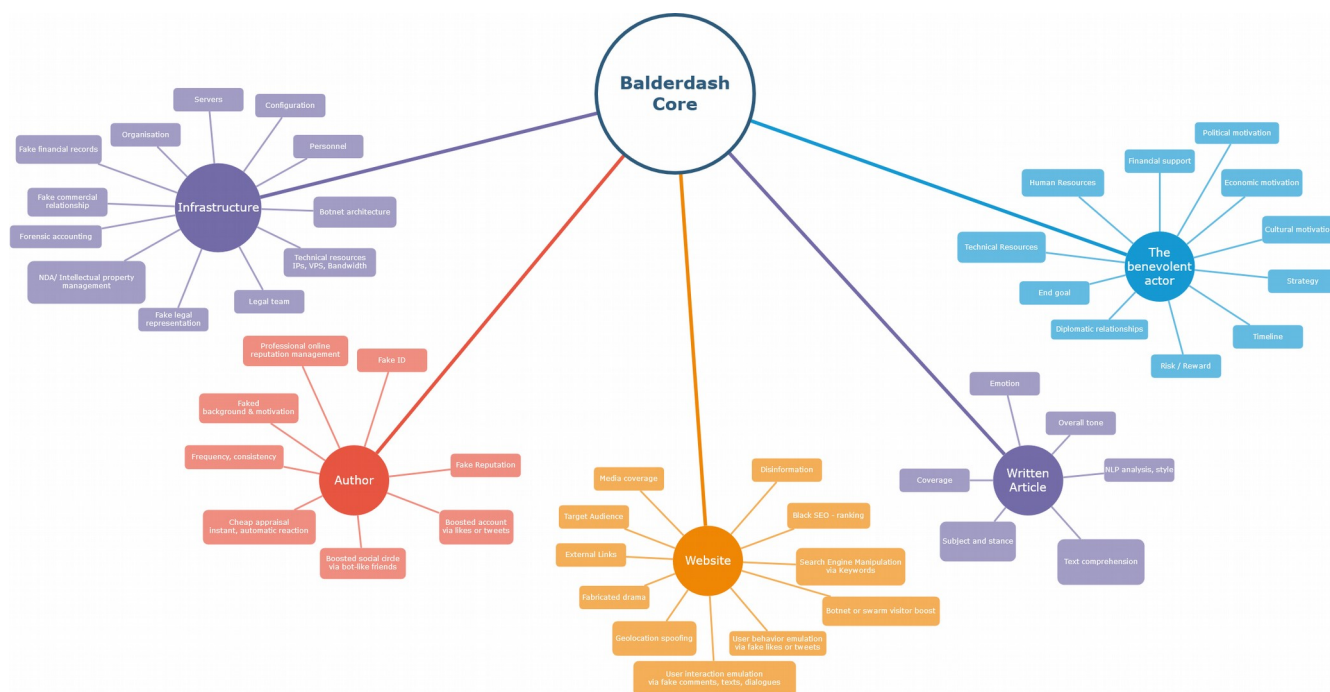

1. A framework of critical thinking

Let's imagine the following scenario – an article tackling the Hong Kong protests written by a so called Ada Khunto.

- Ada Khunto

Let us try to rate this article. Where do we start? I'll make a Balderdash diagram on the next page:

I have identified 5 distinct components:

- The benevolent actor
- Infrastructure
- Website
- Written article
- Author

The benevolent actor is usually the party that pays for the whole operation and benefits if it is successful. Its motivations are primarily political, economic or even cultural. It must provide financial support, human and technical resources and oversee the overall attack strategy and ensure a fixed, realistic timeline is put in place for efficiency purposes. Overall, diplomatic relationships play a big role in this high risk/ high reward operation, making it possible for even the slightest mistake to greatly damage the benevolent actor's reputation.

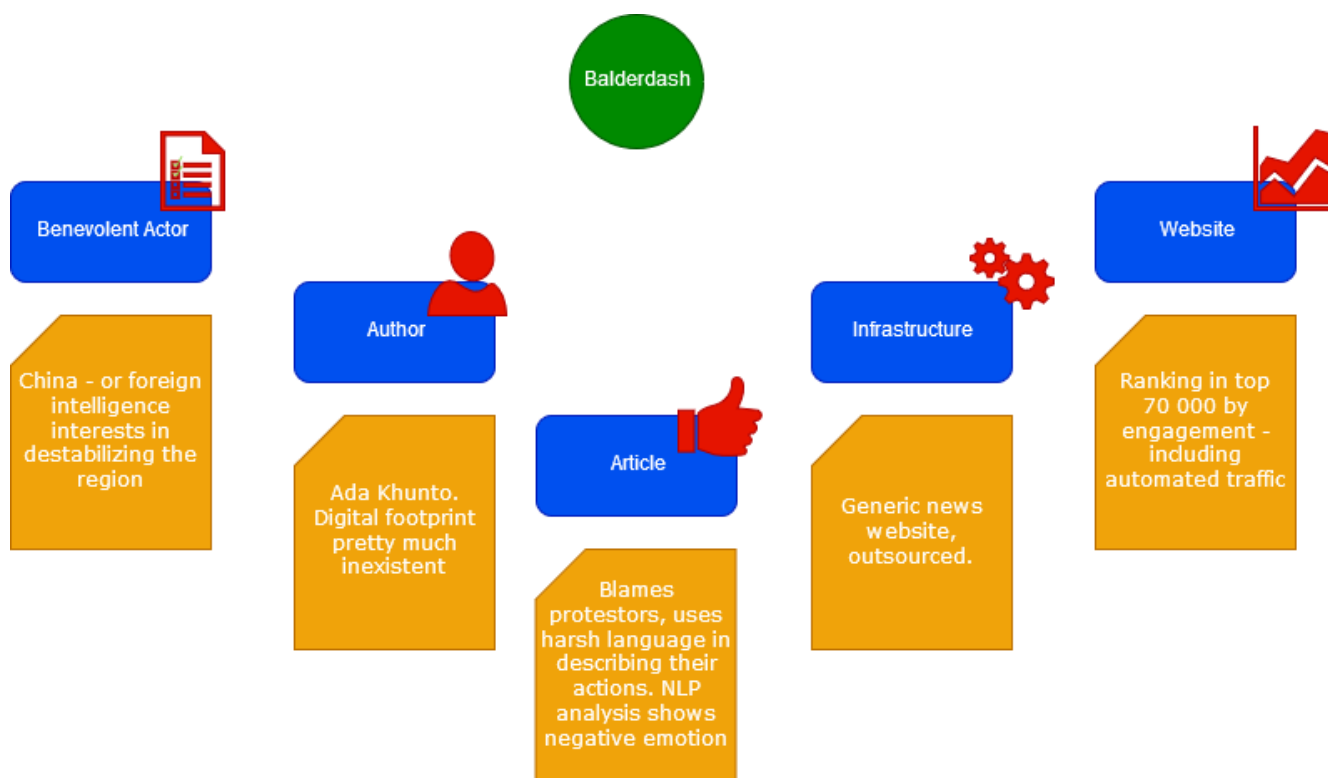

Infrastructure – how will this monster operate? Servers, configurations, trained and qualified personnel, technical resources – like IPs, VPSs and so on, the method by which the botnet is put together, its architecture, the legal backbone of the front organization, legal team, fake financial records and resistance to forensic accounting inspections, fake business relationships in order to make it look legit and the obvious NDA or intellectual property clauses in order to shield the parent company from legal liability.

Website – where will the content be displayed? LinkedIn, Facebook and Twitter are obvious first choices yet dummy websites can be used as well. This is where the disinformation campaign will take place. Using black SEO methods to boost the website’s visibility and keyword manipulation, the very first objective is to put the content out there, to make it visible. The second phase usually consists of artificially boosting the website by fake visits via bots in order to increase click rates and thus making the website seem more popular. More advanced boosting methodologies can be employed by faking user comments or reactions, even fabricating artificial conflicts and drama. Just like the fake legal entity that needs several layers of protection against scrutiny, so the website must make sure that the fake traffic injection process is hard to detect and trace, via geolocation spoofing or device signature spoofing. When sufficient real users are attracted, the audience targeting process starts, by conveying information to a small group of interest.

Written article – aka fake news, is the core component of the disinformation campaign. Various psychological tricks are used, ranging from emotion manipulation to text comprehension traps and natural language processing analysis to convey the author’s stance and opinion on the subject at hand.

Author – the person that actually writes the article. On dummy websites, it can be just an “Admin”. On Facebook, Twitter or LinkedIn however, a comprehensive online reputation management campaign is mandatory, albeit this can be achieved via bots as well. Besides artificial means of boosting the author’s credibility and visibility, other more traditional ways can be as effective – that is recruiting journalists. The latter can be a more slow approach yet harder to detect, ensuring organic growth rates that look natural and spontaneous.

Let us apply our critical thinking framework to this fictive article by Ada Khunto.

2. Interaction model

Here is where the “social network dynamics” part comes in. For this, we will use NetLogo and several models from its library.

We will start with a “model based on the famous bounded-confidence model by Hegselmann and Krause (2002), this program allows you to develop hypotheses about the effects of homophily and network structure on the outcomes of social-influence processes in networks. In particular, you can identify the conditions under which the influence process results in perfect opinion homogeneity (consensus) or opinion diversity (clustering)”.

The references for this model are the following:

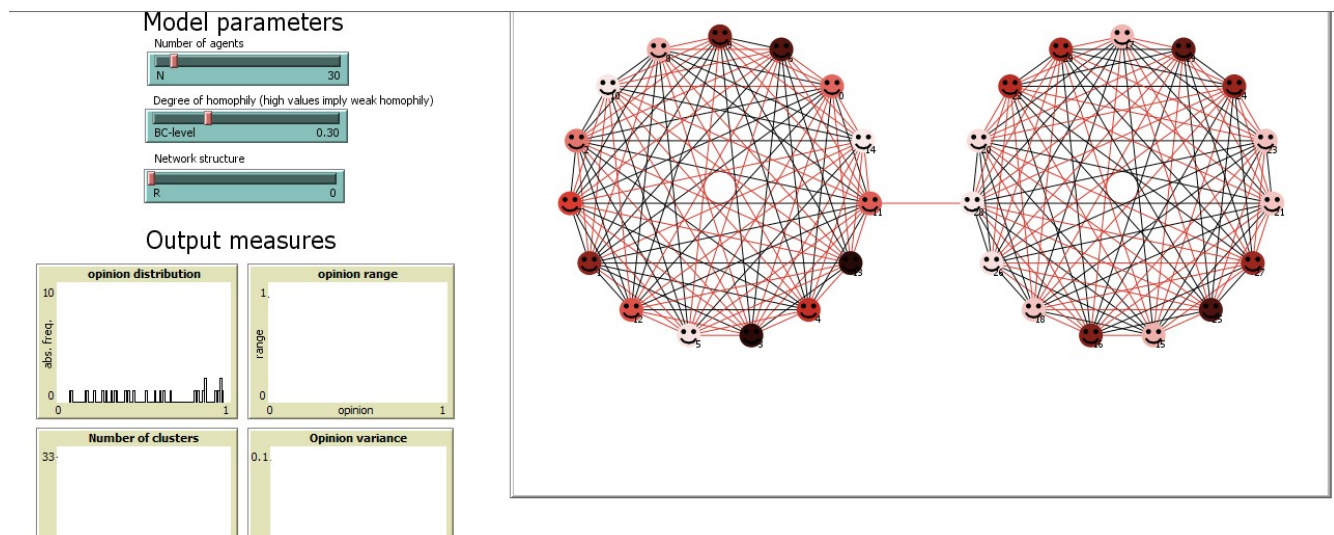

Hegselmann, Rainer and Ulrich Krause. 2002. “Opinion Dynamics and Bounded Confidence Models, Analysis, and Simulation.” *Journal of Artificial Societies and Social Simulation* 5.

Mäs, Michael, Andreas Flache, and Dirk Helbing. 2010. “Individualization as Driving Force of Clustering Phenomena in Humans.” *PLoS Computational Biology* 6 (10):e1000959.

Maslov, S. and K. Sneppen. 2002. “Specificity and Stability in Topology of Protein Networks.” *Science* 296 (5569):910-913.

Pineda, M., R. Toral, and E. Hernandez-Garcia. 2009. “Noisy Continuous-Opinion Dynamics.” *Journal of Statistical Mechanics* P08001.

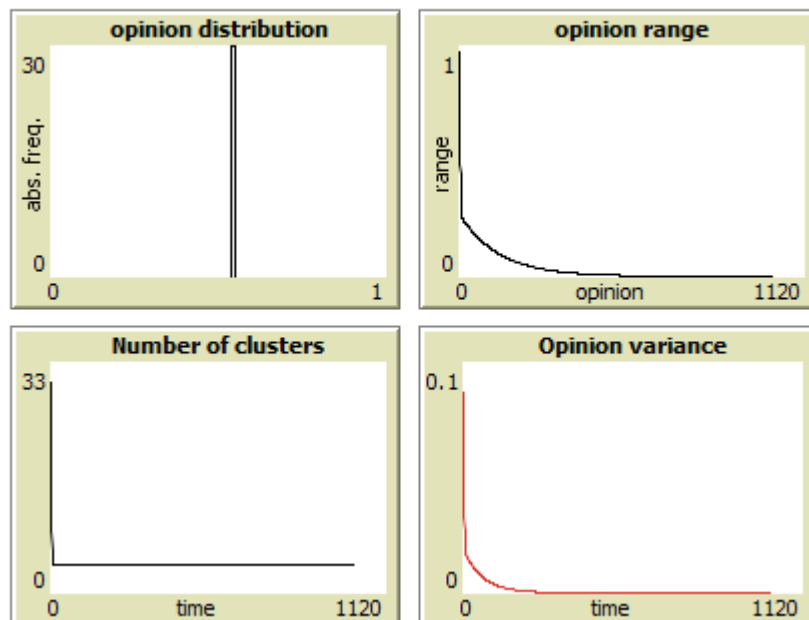

Let us begin:

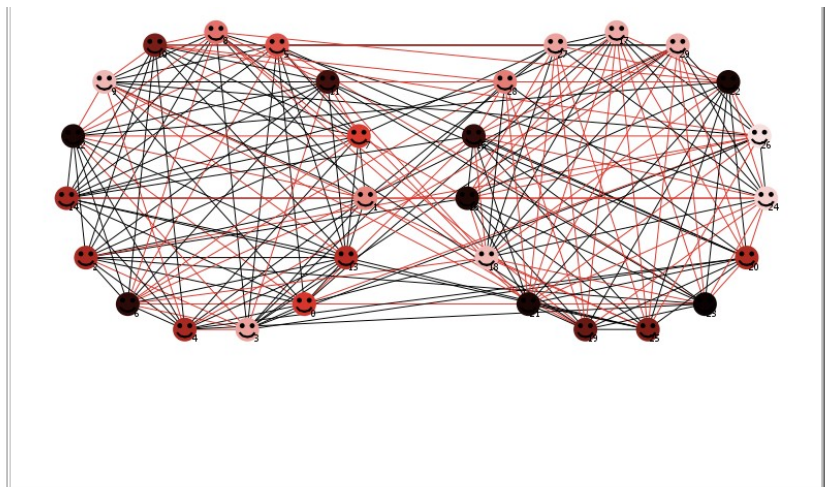

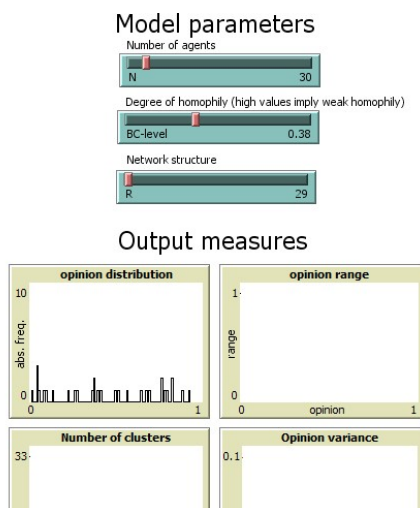

I have set up a basic, rudimentary example consisting of 30 agents – equivalent of a college classroom of students, all their connections, while assuming that there is only one connection linking the two groups – let’s say that that’s the teacher. Let’s see what happens :).

Here are the results:

Output measures

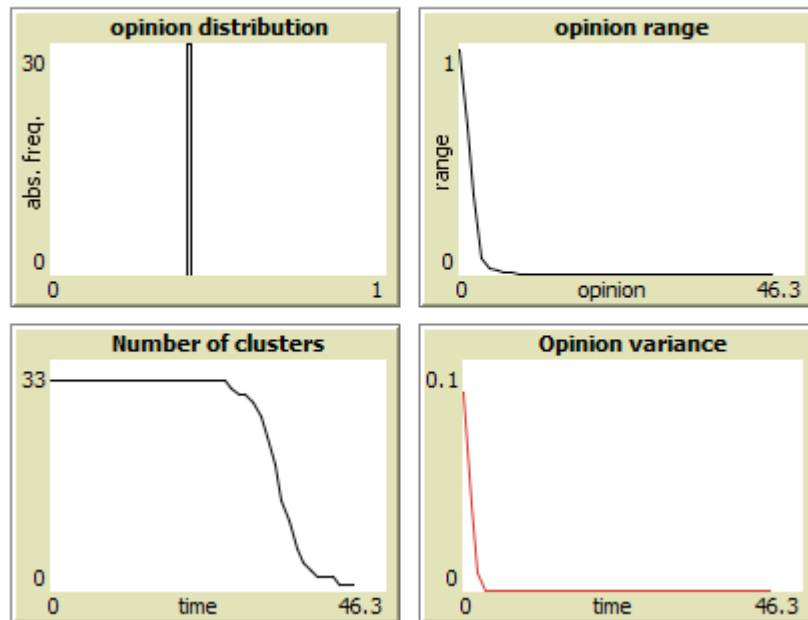

Let's now imagine the same number of college students, but this time they will all know one another:

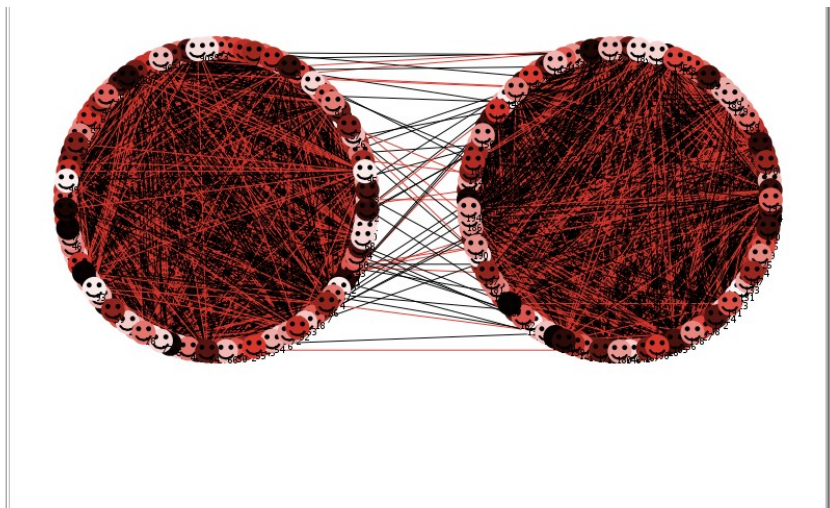

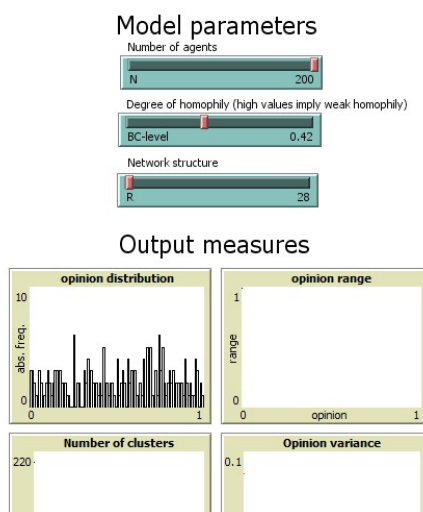

Results:

Output measures

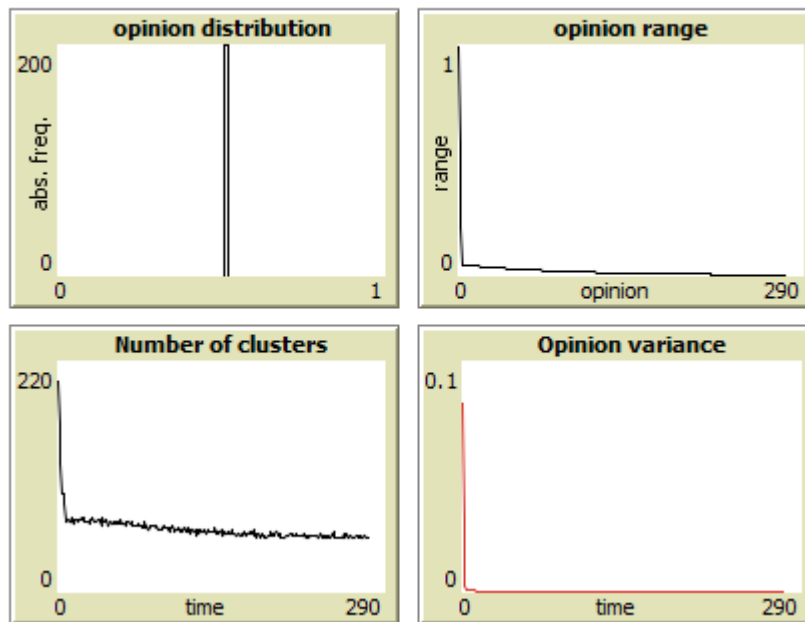

Let us now imagine many more groups of students with lots of connections between them, let's say 200:

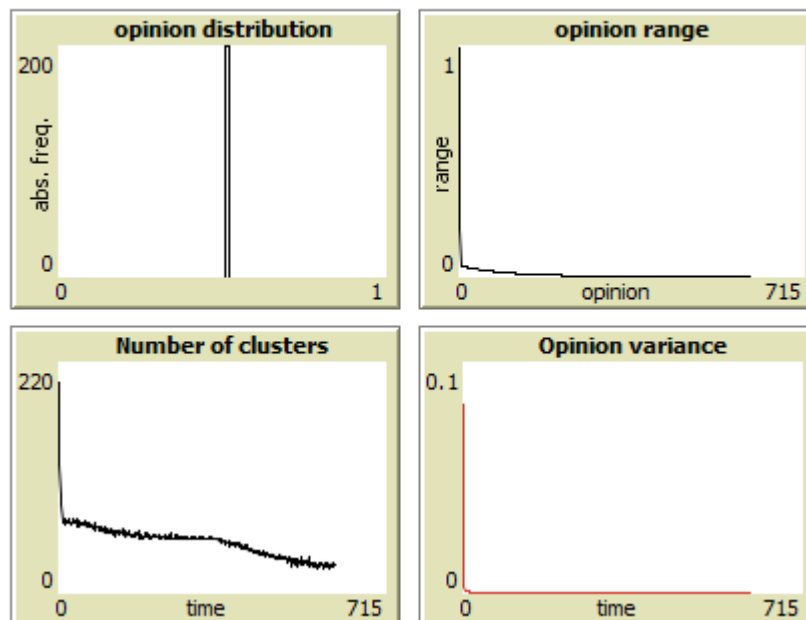

Results:

Output measures

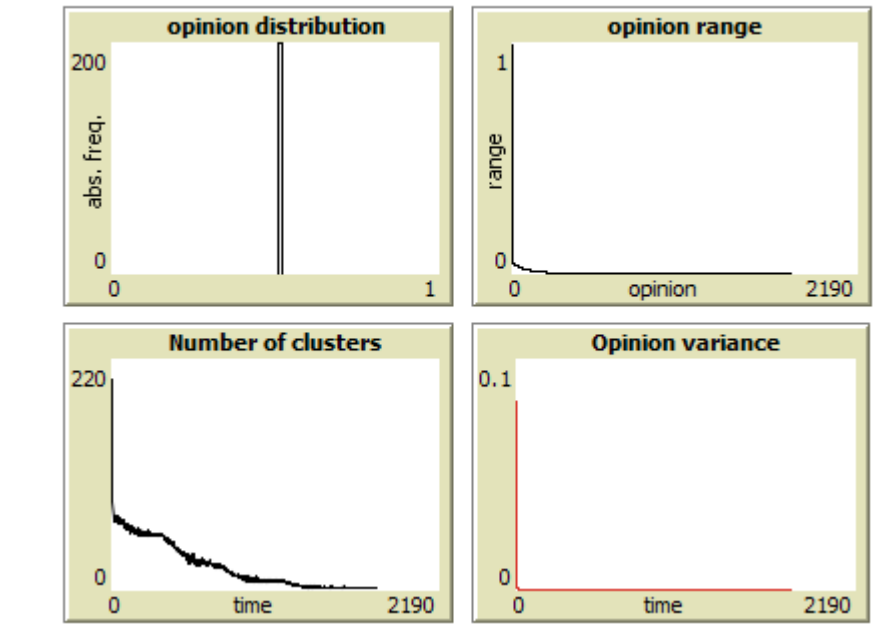

The more the simulation runs, the fewer clusters remain...

Output measures

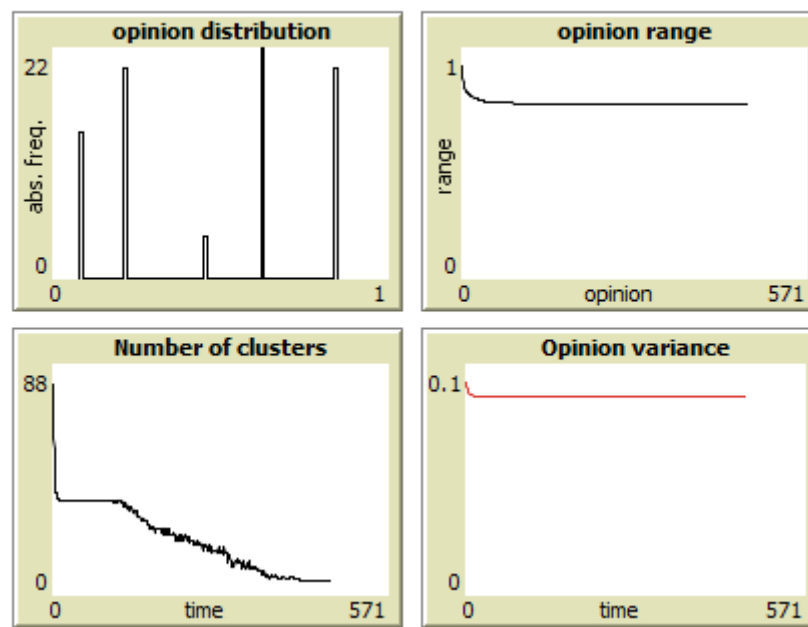

Finally, after many more ticks:

Output measures

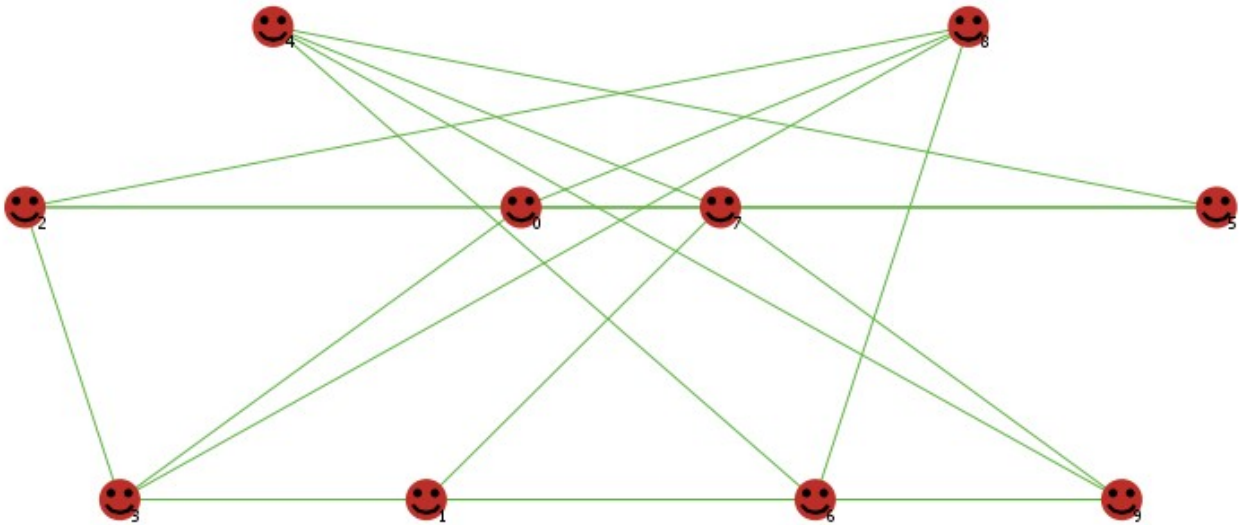

I also wanted to try messing up with the “friendship” value, or how people tend to interact more with those that hold the same views and beliefs as themselves:

Output measures

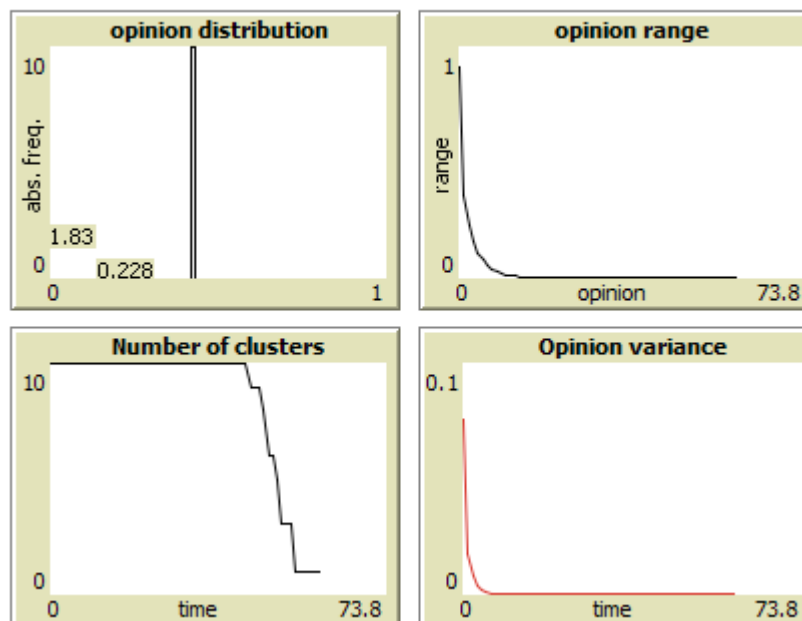

One can clearly see that the opinion variance is much higher in this case. Please note that I have used 100 agents, to simulate real-life scenarios.

Let's try to play a bit more with this. Let's pick just 10 agents and set the friendship level at minimum.

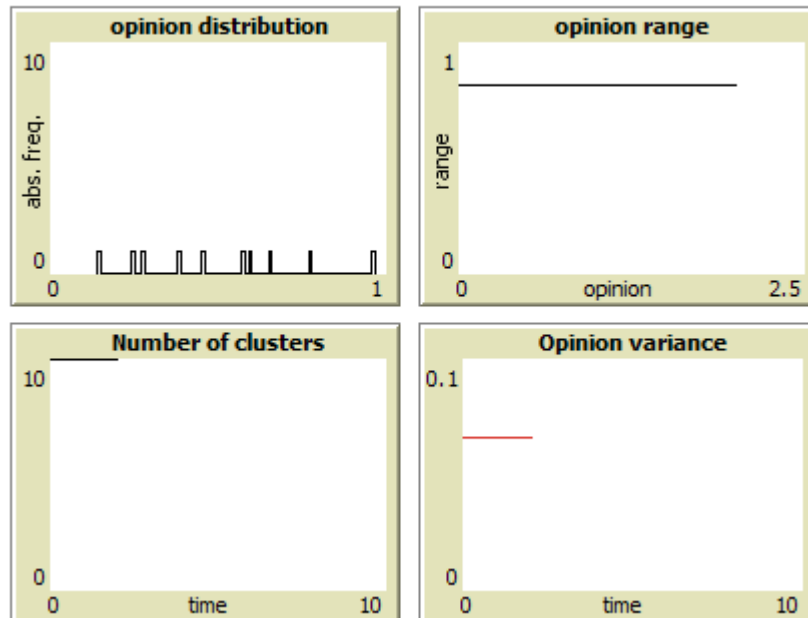

Output measures

Now, with high degrees of “friendship”:

Output measures

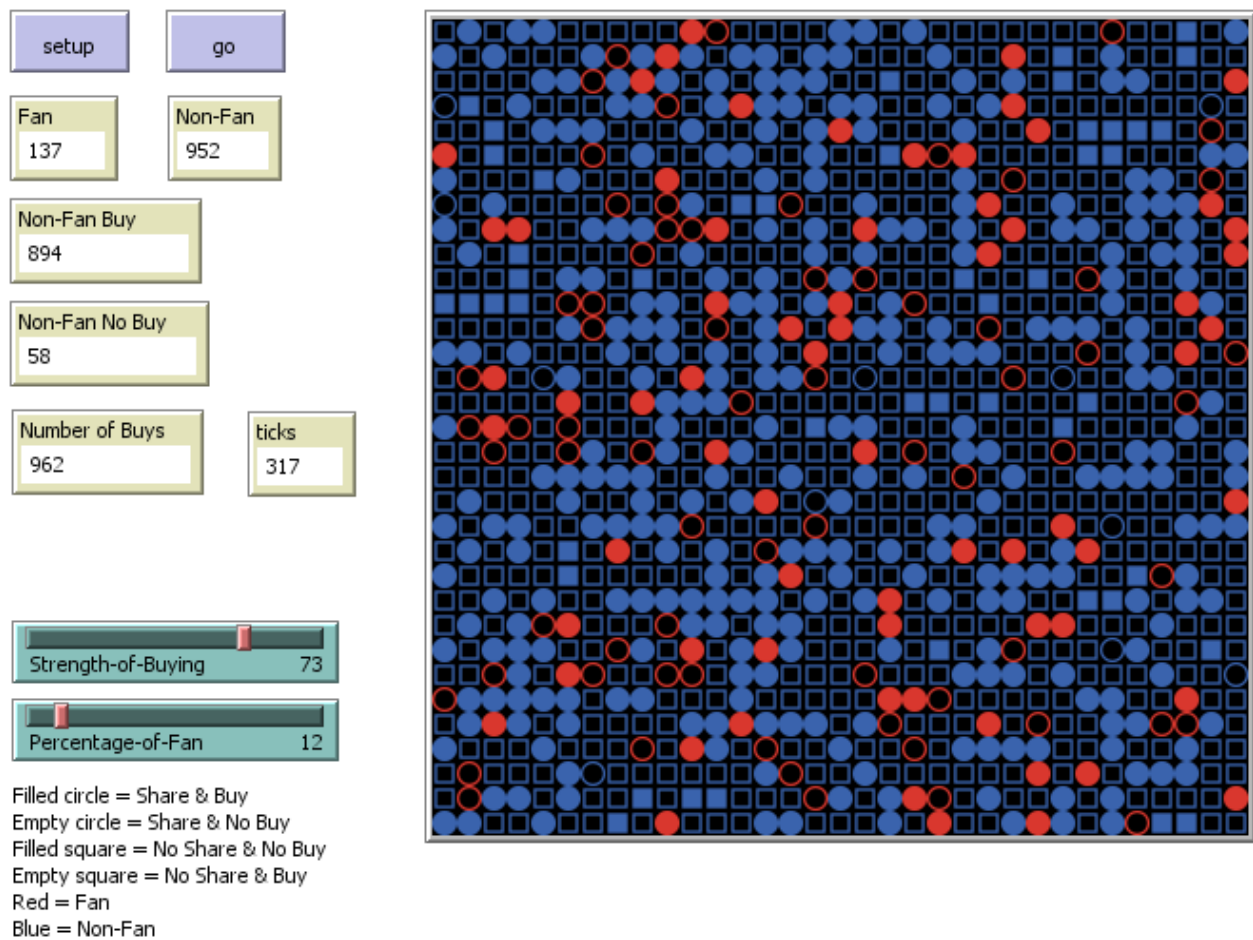

One can easily see that in this instance, the opinion variance is quite high.

Another crucial component is represented by **the actual links between individuals and the opinions they hold. If, by chance, 2 friends have the same initial belief, they can quickly takeover the entire group.**

Next up, we have another model which is built for Facebook: “*This project aims at modeling the behavior of two types of agents in a social network environment, in particular Facebook. The simulation created will demonstrate the positive effects of electronic word of mouth (eWOM) in influencing online buying behavior. This project is inspired by Hsiao and Chen’s writings about the effects of eWOM in their journal article titled, “Product judgment and choice: The moderating role of the sense of virtual world.” The study shows that in a positive eWOM scenario, the attitude of online members towards a reviewed product will positively affect their intention to purchase. This is similar to the theory of planned behavior (Ajzen, 1985) where people formed intention to carry out the action. The stronger the attitude towards people “sharing” information online, the more likely the person is to perform that behavior. If the subjective norm promotes the idea that “sharing” increase positive attitude in the product, people are more likely to share and in another way increases buying behaviors. Facebook was selected as the social network in this model as it is an effective marketing tool that is widely utilized by many companies online, primarily due to its relatively lower cost as well as its high population and ubiquity. Facebook “Shares” is a canonical example of what constitutes a positive eWOM. More importantly, positive eWOM arising from Facebook “Shares” can serve as an attestation*

of the company's credibility and eminence, reducing uncertainty in consumer decision-making (Ravi et al, 2011).”

After the initial setup, we are ready to see it in action:

This one tries to portray the medium of exchange as well as customer affinity. While their objective is set on buying decisions, this closely relates to the matter of fake news as well.

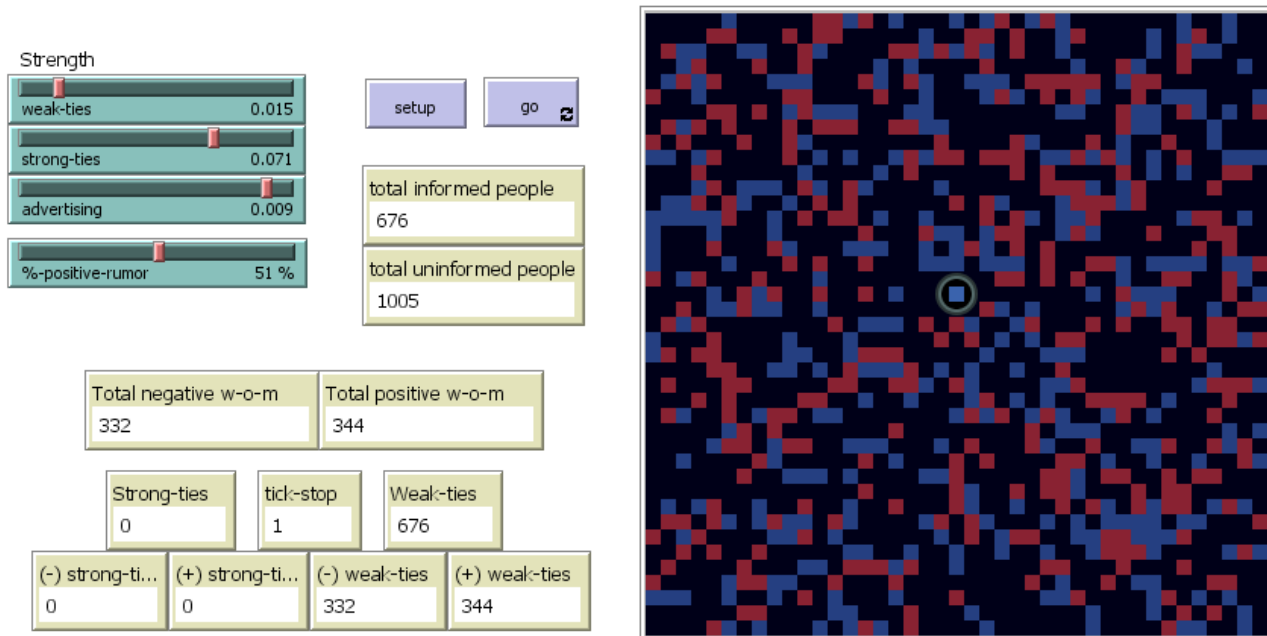

I have also find another great model on the spread of information in a community setting:

“In brief, this simulation is built on as a continuation to the previous model on Talk of the Network (Goldenberg et al., 2001) with an add-on feature.

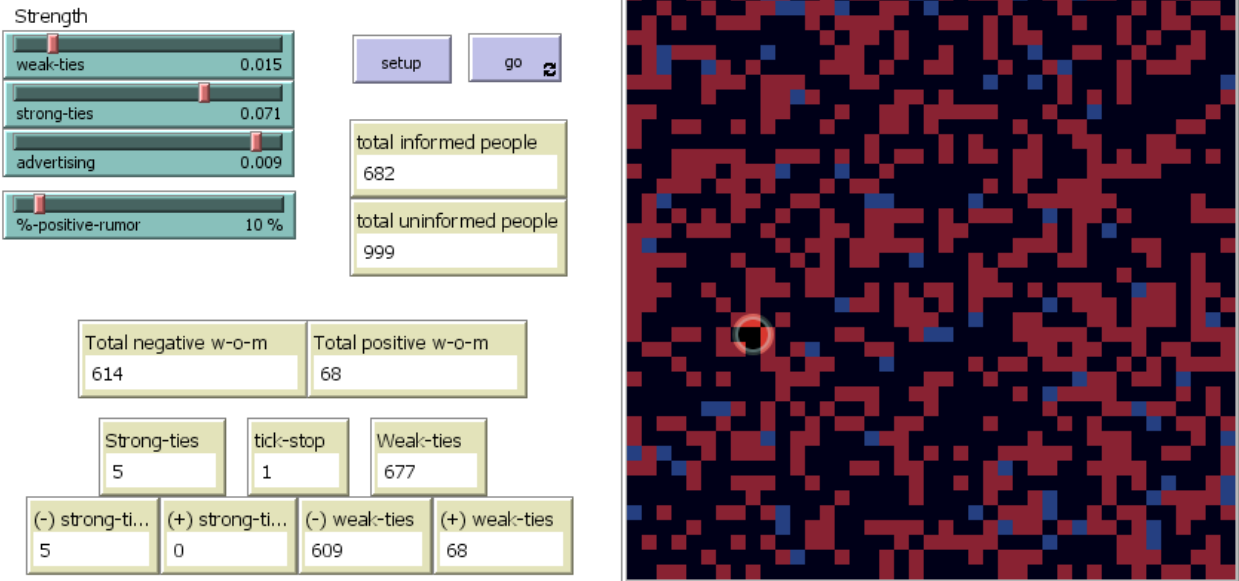

This simulation will let user observe how information is being spread in the community. For this simulation, members of the community will be stationary. If the collection of information coming from others with strong and weak ties is strong enough to pass their threshold, they will turn from the state of “uninformed” to “informed”. Each member of the community will have its own unique threshold of getting into the informed state. And just as in real life, members will put higher value in the information spread by someone close to them than those who are not directly connected to them.

In general Word-of-Mouth (w-o-m) can be defined as the sharing of information (opinions or recommendations) through communication among people about products and services (Westbrook, 1987). In business area, a lot of companies are aiming to increase their brands knowledge through various word-of-mouth methods – offline (e.g. face-to-face) as well as online (e.g. through SNS). Of course, advertisement also plays a role in the sharing of information by being the initial contact as well as one of the influencers in getting people to know a brand. But, contrary to popular belief, in long-term, advertisement is not as powerful as w-o-m in contributing to the spread of information (Buttle, 1998; Keller & Berry, 2003; Laborie, 2006). Not only brand knowledge, researchers also found that w-o-m influenced almost 70% of customer’s decision to buy (Balter, 2008).”

I started out with a 51% of positive rumors:

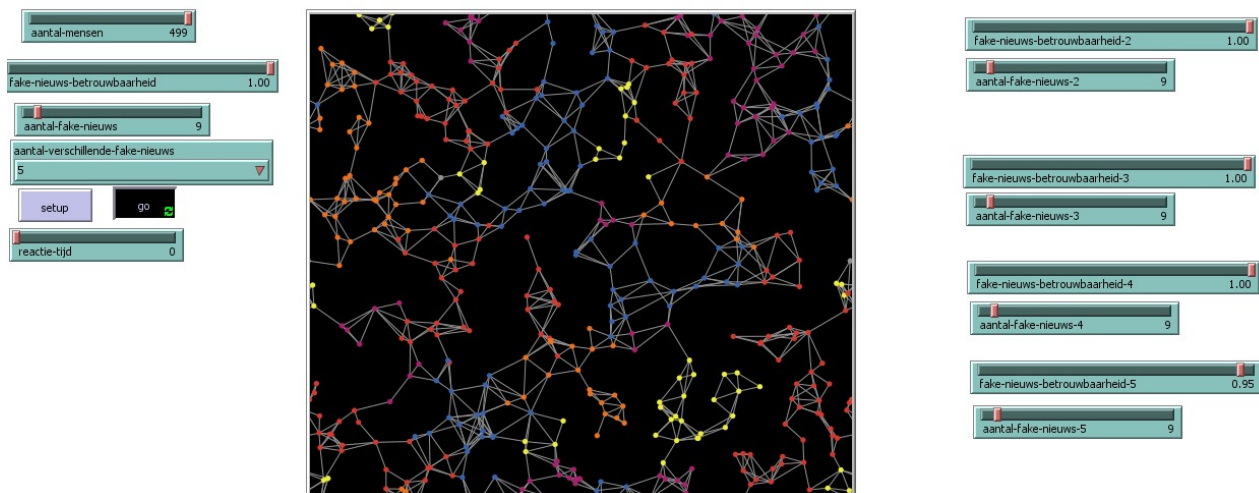

In order to simulate a disinformation campaign, lets try 90 % :

The difference is quite large, as one can imagine already.

Last but not least, I have found one that tackles fake news, unfortunately however, the interface is in German:

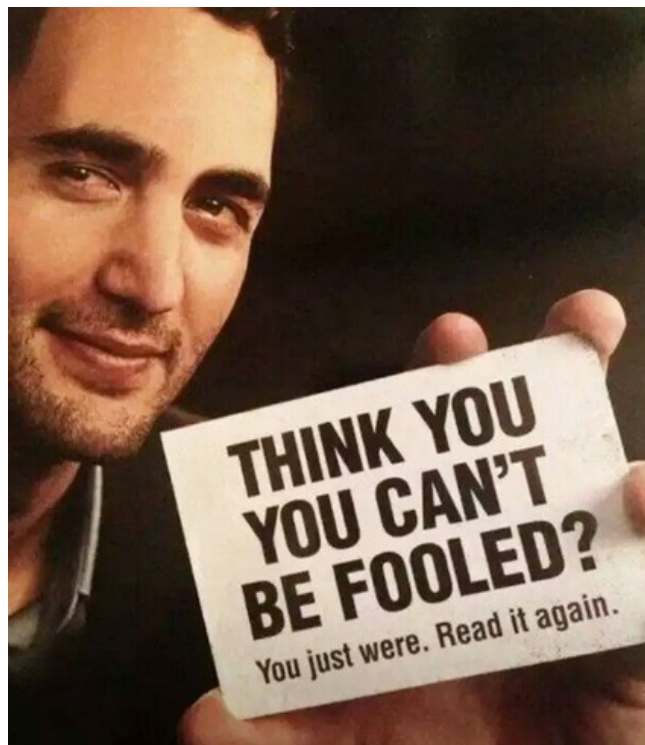

It pretty much emulates the spread of fake news by colors in a network of agents.

3. Countermeasures

One of the best ways of countering fake articles is by choosing your sources well and be accustomed with critical thinking principles and psychological biases. A general understanding of the human thought, politics and a mix of real-life experiences and events are mandatory in order to resist the ever increasing complexity and sophistication of disinformation campaigns. In the past, one would rely on his senses and intuition – yet, when algorithms can fool our eyes, ears and play with our emotions, only our minds can stand as our last barrier of defense. Some of the countermeasures I mentioned earlier can be taught, yet most of them must be gained by experience. You can't achieve much from books alone – a deep connection with the human psyche must be attained in order to understand humanity's darkest corners of cognition.

Conclusion: Balderdash is a short project, without any references or academic integrity. It's just for fun and to raise awareness of the capabilities that technology has when it comes to fooling the human mind.

Chelălău Ionuț Mihai, R&D Engineer
